

Review previous road safety audits that have been undertaken on the trunk road network. Identify corrective measures that were implemented to mitigate the shortcoming identified at the time. Undertake a review of the horizontal and vertical alignments of each link to pin-point possible design inadequacies. Undertake a route assessment of each link of the Corridor to identify the existing road safety shortcomings. Hold stakeholders consultation. Identify potential risks to the road users including pedestrians especially in urban settings and settlements along the road links. Recommend cost-effective corrective measures for each identified problem to mitigate the identified shortcomings.

Road Safety Audit

Trans-Kunene and Windhoek Luanda Corridors

PROJECT STATS

Value NAD 1.33 million
USD 0.08 million (ROE 16.24)

Location Various Regions
